

Verizon Wireless Telco and Safety Boxes

Verizon Wireless Telco and Safety Boxes from Intersect deliver fast, easy and lightweight installation. These flexible cabinets integrate DC fans, door alarms, GFI receptacle, internal light bar, ground bars, and T-1 protection modules – even air conditioning – all in a cost-effective, space-saving aluminum cabinet.

UL Listed, Telco Boxes feature a variety of components that may include a GFI receptacle and DC fan, factory-wired with pigtail cables coiled in the panel to simplify connections. Safety Boxes feature a shelf, document holder and even an umbrella for inclement weather.

The NEMA 3R Safety and Telco Box enclosures are constructed of corrosion-resistant, powder-coated aluminum. These lightweight panels install quickly and save valuable site space, as well as provide an aesthetically pleasing appearance. The cabinets stay secure via a door handle that is pad-lockable.

Screen vents at the top and bottom of the Telco Box doors optimize air circulation and prevent insect entry.

With three standard Telco Box models plus the Safety Box, Intersect has cabinets to fit every installation need. A “retrofit” door is offered with the air conditioning unit and a duplex receptacle for high temperature environmental demands.
